Managing Private Keys 25-10-2025:

KEY TAKEAWAYS:

— Not your keys, not your crypto – this is crypto's most important mantra.

— Crypto means freedom from banks and central authorities – but it also means greater responsibility for you. How you approach this may define your experience.

— While hot wallets allow you to store your crypto conveniently online, your private keys also remain connected to the internet, and this is a significant threat to the security of your assets.

— Using a hardware wallet allows you to keep your keys completely offline even when signing transactions, and is by far the most secure way of managing private keys.

As we previously touched on, when you are your own bank, you are the only one who has control over how your money is used—for better or for worse.

While you no longer have to deal with extortionate fees and endless hoops to jump through to access your money, you also bear full responsibility for the security of your assets.

After all, if they're lost or stolen, it is unlikely anybody will be able to help you recover your funds.

...This too goes for cryptocurrencies.

Though managing private keys can empower you with financial freedom and unlock a wealth of new opportunities, you will need to take steps to ensure your digital assets are both secure, and easily recoverable in the unlikely event that anything should go wrong.

This means you will need to use a wallet that makes the process essentially fool-proof.

After all, we have all heard stories about the man who accidentally threw away a hard drive containing Bitcoin that had ballooned in value to more than $100 million as of 2017. Or the countless other poor souls who had misplaced their wallet file and had forgotten to create a backup—permanently losing their funds as a result.

This is because just like cash, if cryptocurrencies like Bitcoin or Ether are lost, they're practically impossible to recover.

This is both one of the greatest strengths and weaknesses of digital assets—since the same security that prevents them from being hacked, also prevents them from being forcibly recovered without authorization.

When it comes to cryptocurrencies, this authorization usually comes in the form of a recovery phrase. Depending on the wallet you use, this is usually either a 12 or 24-word phrase which is the ultimate key to your funds.

Address and Private Key Backup Table
