What Is a Worldcoin and HEX Private Keys? 28-10-2025:

What is Worldcoin?

Worldcoin, launched in 2023, uses a biometric system called World ID that verifies users through iris scans using a device called an Orb. Once verified, users receive a small amount of Worldcoin (WLD) [around $42 on average], allowing global participation in crypto without prior investment.

Worldcoin aims to solve two major problems: digital identity verification and global economic inclusion. Worldcoin tackles the problem of online identity by offering a proof-of-humanity solution, allowing users to participate in the digital economy with a verified identity.

What Problem Does Worldcoin Aim To Solve?

Worldcoin aims to solve a digital identity crisis set in an (almost) inevitable future where a human verification layer is added to the internet. At the rate that AI is taking over the internet today, with deepfakes, lifelike videos presented on various social media in almost any style and aesthetic, it is important to understand what's real and what isn't. This is what Sam Altman and Alex Blania, along with its parent company Tools for Humanity aims to do with the Worldcoin Project.

On the other hand, Worldcoin is also aiming to create a new global economic network. The project combines a digital currency called Worldcoin (WLD) with a unique digital identity system, allowing users to prove they are real, unique humans.

Over time though, some serious concerns have come up that challenge its big promises. To prove you're human, you have to scan your eye using the Orb, but that's raised privacy worries.

People are unsure how safely that eye data is stored or if it could be misused or hacked.

Private Keys in HEX
