

Balance Seed Phrase table list.

Date: 2025.07.22

BIP39:

Bridging Security and Usability in Crypto

BIP39 standardizes the creation of mnemonic phrases to help users back up their cryptocurrency wallets with simple words. These phrases are generated from random data and contain between 12 and 24 words drawn from a list of 2048 carefully chosen terms. This approach minimizes mistakes and makes wallet recovery accessible even to non-experts. Users can also add a passphrase for an additional security layer, which strengthens the protection of their funds. The mnemonic phrase and passphrase together produce a seed that can regenerate all wallet keys deterministically. BIP39's design balances strong cryptographic security with user-friendly backup methods.
