BIP39

Making Crypto Backup Effortless and Secure

BIP39 transforms complex cryptographic data into a set of easy-to-remember words called a mnemonic phrase. These phrases, typically 12 to 24 words long, allow users to back up and restore their cryptocurrency wallets without needing to manage raw keys. The words come from a standardized list of 2048, which helps reduce errors during recovery. Users can add an optional passphrase to strengthen wallet security even further. This phrase and passphrase generate a seed that can recreate all wallet keys deterministically. Thanks to BIP39, securing and recovering crypto assets has become more accessible for everyone.
