

The Secret Behind Mnemonic Phrases: BIP39 Explained

Date: July 12, 2025

BIP39 is a standard that transforms cryptographic entropy into a sequence of human-readable words. It allows users to back up their crypto wallets with a simple list of 12 to 24 words. These words are selected from a fixed set of 2048 English words, minimizing the risk of errors during recovery. The standard also supports an optional passphrase, which adds an extra layer of protection to the wallet. The final output is a seed that can deterministically generate an entire family of keys. Thanks to BIP39, managing and restoring wallets has become more secure and user-friendly across many blockchain platforms.

Seed Phrase List
