

## 2026-06-01 — THE ONGOING DEBATE OVER NFT ROYALTIES — BIP39-PHRASE.COM

Non-fungible tokens (NFTs) have revolutionized digital ownership, giving creators a new way to monetize their work. However, as the NFT market evolves, the subject of NFT royalties—a percentage of future sales paid to the original creator—has sparked significant debate within the community. Proponents of royalties argue that they provide artists with a sustainable revenue stream and help ensure that creators benefit from their work's appreciation over time. This feature, they claim, is one of the core innovations that make NFTs attractive to artists and digital creators.

Conversely, critics point out that NFT royalties are not enforceable at the protocol level by most blockchain infrastructures. As a result, NFT marketplaces can opt to ignore royalty payments, or allow buyers to circumvent them. Some platforms have even removed mandatory royalties, sparking frustration among creators who feel their rights are being undermined. These moves have put pressure on the entire NFT ecosystem to find a viable solution that balances the interests of creators, collectors, and marketplaces.

Recent attempts to standardize royalty enforcement include the development of new smart contract protocols and collaborations among leading NFT platforms. However, mandatory royalties can reduce liquidity by increasing transaction costs, potentially deterring collectors and traders. Some market participants advocate for optional royalties, allowing buyers and sellers to determine if they wish to honor them, but this approach also diminishes revenue for creators.

The debate illustrates a central tension in the NFT space: the need to support artists versus the desire for open, permissionless markets. While the technology to enforce royalties universally does not yet exist, the community continues to experiment with social norms, innovative contracts, and platform policies. The outcome of this debate will likely shape the future of NFT economics and digital creative ownership in the years to come.
