

What Is DYOR? 25-01-2026:

Is it even worth your time to DYOR on the token in question? Every day, thousands of coins are created in the crypto ecosystem. Believe it or not, over 1 million coins were created in April 2024 alone. Many of these coins are valueless, but even those that make their rounds on Twitter and have some compelling price action may not be as legitimate as they seem. Oftentimes, a coin's value as a meme alone is enough to catapult it into the stratosphere—at least long enough for early adopters to sell their bags.

Memecoins and low-effort NFTs aren't necessarily launched with malice but often with an irreverent attitude of "sounds fun" attached to them. Dogecoin embodied this well in 2013. It was launched as a satire with tokenomics counter to Bitcoin's value proposition of "will never have more than 21 million coins". But not every memecoin is Dogecoin, and not every NFT is the next 1000x.

Investing in Crypto tokens carries inherent risks. The common mantra is, "Don't put anything into crypto you can't afford to lose" but the truth is more nuanced than that. The most popular cryptocurrencies, such as ETH or BTC have long histories. Plus with the introduction of spot ETFs for both coins, their chances of going to zero are much smaller than those of a meme coin launched on Twitter yesterday.

Like any asset class, the alpha and outsized returns usually go to those at the cutting edge of technology, deal-flow access, and knowledge. Although crypto democratizes much of that access, you probably have little knowledge of the potential value of an asset unless you've spent years honing your crypto research skills. Buying an established coin such as Bitcoin or Ether is less risky than buying app tokens, NFTs, or memecoins.

Some of the best crypto investments were often hard for many people to understand, but most were pretty straightforward. Uniswap and Aave (formerly ETHlend) were rather straightforward, acting as decentralized versions of their traditional Finance counterparts.
