

What is x402 11-12-2025:

The internet economy has always struggled with payments. Traditional rails like credit cards and bank transfers were built for a physical world, and using them for digital payments can be a process riddled with friction. For human users, this has led to an internet experience dominated by intrusive ad-tracking or fragmented “walled gardens” where you must juggle dozens of subscriptions and passwords just to access content.

For the emerging economy of AI agents, these legacy rails are a complete roadblock: autonomous software cannot open a bank account, pass a KYC check, or physically hold a credit card. Without a native way to transfer value, AI agents are stuck, unable to pay for the resources they need to complete tasks. This leads to a need for human intervention, which ultimately defeats part of the purpose of using autonomous agents in the first place.

x402 solves this by introducing an open standard that finally enables seamless value transfer via the internet. It creates a universal language for instant, permissionless payments that serve both autonomous AI agents and human users alike.

x402 is an open payment standard developed by Coinbase and launched in May 2025. It serves as a decentralized payment rail for the internet, enabling AI agents and web services to autonomously pay for API access, data, and digital services.

Powered by onchain technology and digital currencies—primarily stablecoins like USDC—x402 leverages the long-reserved HTTP 402 “Payment Required” status code. If an API request lacks payment, x402 allows the server to respond with a 402 status, prompting the client to pay and retry instantly. This simple mechanism eliminates the need for API keys, accounts, and subscriptions, allowing for real-time, machine-native transactions. Designed to be chain-agnostic and permissionless, x402 offers instant settlement and near-zero fees, making it the ideal solution for AI-first commerce. This vision is backed by a coalition of companies from both the blockchain and tech industries, including Cloudflare, AWS, Anthropic, Circle, and NEAR.
